

Hitachi Supplier Relationship Management (SRM) Solution

e-Procurement System (Web-EDI)

Hitachi e-Procurement System (Web-EDI) enables you to optimize the procurement process, maximize production capabilities in the supply chain cycle & reduce procurement operation costs.

Web-EDI Structure

Cost-savings with Web-EDI based PO transaction

- Use Web-EDI based PO transactions to minimize the manpower costs, communication expenses and miscellaneous fees. Web-EDI helps you assign important resources to core businesses, and improve the entire procurement process and performance.

Minimize lead-time of Supplier Response and Acknowledgement

- Automatic Email alert function notifies suppliers to view PO immediately allowing buyers to manage overall PO status of respective supplies in a single screenshot.

Minimum Implementation Downtime

- With rich features such as PO, materials order forecast, order balance, supplier performance management...etc, you can easily modify the system to meet your unique requirements.

Enjoy a host of Advantages

Optimized Materials Delivery Control

- Optimize the materials delivery control by sharing Buyer's requested delivery date and suppliers' delivery schedule for greater efficiency in inventory and production control.

Effective Supplier Performance Management

- Improve suppliers' performance by analyzing the order balance and number of rejected items delivered by respective suppliers.

Enhanced Payment Process

- Ability to activate early payment advice to suppliers to eliminate delays in confirmation of orders.

Visualization of Suppliers' Production Process

- Quick recognition of suppliers' production process and increased visibility of the production status for efficient production control.

Effective Material Inventory Adjustment

- Provides quick assessment and action for future materials inventory adjustment by sharing the buyers' demand forecast & suppliers' delivery schedule between buyers and suppliers.

Accurate Inventory Management

- Provides gap analysis of material order forecast, actual order results and actual results of materials supply. This analysis enables you to assess suppliers' production capabilities for accurate inventory management.
